

WHICH BOVEDA RH LEVEL IS RIGHT FOR YOUR FLOWER

RELATIVE HUMIDITY (RH)	PROVIDES MAXIMUM MOISTURE CONTENT FOR
BOVEDA 58% RH	<ul style="list-style-type: none"> • Slightly drier buds • Joints • Pre-rolls
BOVEDA 62% RH	<ul style="list-style-type: none"> • Stickier buds • Drier climates • Higher altitudes

WHICH BOVEDA SIZE IS RIGHT FOR YOUR FLOWER

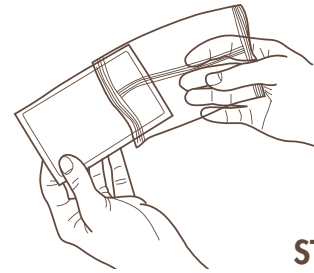

BOVEDA SIZE	CONTAINER/USE & AMOUNT OF FLOWER
320	TOTE: Up to 5lbs (2.3kg)
67	TURKEY BAG: Up to 1lb (454g)
8	PERSONAL JAR: Up to 1oz (28g)
4	TRAVEL CASE: Up to 1/2 oz (14g)
1	PRE-ROLLS: Up to 1/8 oz (3.5g)

TIP: Boveda can never over-humidify cannabis. Use more Boveda than what's indicated in this chart and you'll find Boveda:

- Works more efficiently
- Offsets challenging seasonal, climate and altitude effects
- Lasts longer

HOW TO USE BOVEDA

1. Remove the plastic overwrap from the Boveda.
(DO NOT open the Boveda itself.)
2. Place the unwrapped Boveda inside your airtight cannabis container. (Boveda is safe to touch cannabis.)
3. Close your container and you're done.

STEP 1

TURKEY BAG

PERSONAL JAR

CVault®

WHEN TO REPLACE BOVEDA

Every 2 to 4 months or as Boveda starts to get hard and crunchy.

NOTE: Do not mix Boveda RH levels within the same cannabis container. And do not use Boveda in the same cannabis container with other humidification products, like wet sponges, beads, gels and PG solutions. They will fight against each other and reduce the efficiency of the Boveda.
